DESCRIPTORS: *Rhythm, Malaria, *Mosquitoes,
*Photoperiodism, Climatic factors, Light, Tempera-
ture, Time, Ovaries, Reproduction, Growth

The physiological state of females of *A. maculipennis*
messeae is determined by the illumination program dur-
ing the developmental cycle: a short day (12 to 15 hr
light out of the 24) brings about effectual diapause in all
individuals; a long day (20 to 22 hr) evokes development
without diapause to 100% diapause is gradual, with
about 50% of individuals in diapause at the 16 hr day
(at 23°C). The varying duration of illumination during

Ishin, Yu. D.
CZECHOSLOVAK AEROSOL GENERATOR
(Chekhoslovatskiy Aerosol'nyy Generator). 22 Sep 60,
4p. Trans. V-1621.
Order from LC for SLA m\$1.80, ph\$1.80 61-13804

Trans. of Lesnoye Khozaystvo (USSR) 1958, v. 11,
no. 9, p. 56-57. 70-2207

The 11-kilogram RAG-1 generator consists of a pulsating atomizer, gasoline tanks, tanks for the toxic chemicals, and cooling and protective shells. In field tests with an 8% solution of DDT and hexachlorocyclohexane in diesel fuel the gasoline consumption was 1.2 liters per hour and chemical consumption was 18 liters per hour. The generator was good for treating single trees, gardens, and young tree cultures. Generator power was insufficient for treating dense plantations with trees over 30-meters high, and the operation was greatly effected by weather.

(Agriculture, TT, v. 5, no. 8)
